Castors

Castors are either single, double or compound wheels. This assists in the multi-directional steering of the item it is fixed to. There is a difference between castors and wheels. Wheels form part of a castor. The formation of a castor is the joining of the wheel to the castor frame. The design of a castor frame can be either rigid or swiveled.

Having uses in many industries, institutions, facilities and even in households. You can find castor wheels on almost anything, from shopping carts to office chairs and trolleys. The purpose of a castor is to reduce the requirement of manual labour. With a key purpose to provide the highest rate of load bearing capacity. Which then assists workers in the transfer of items easily.

Conveyors

Gravity roller conveyors transport items along a conveyor, allowing them to move freely and safely along a conveyor line.

We have a wide range of conveyor systems & components to suit any application.

- Gravity Conveyors
- Powered Line Shaft Conveyors
- Powered Flex Conveyors
- Belt Conveyors
- Ball Transfers
- Conveyor Rollers
- Flow Rail
- Skate Rail

Fork Stackers

Fork stackers are useful for increasing productivity in different industries. Our range of stackers can accommodate loads ranging from 150 up to 1,500kg, there is one for every application.

These powered fork stackers have been engineered and manufactured according to the very strictest quality control measures, allowing us to offer our customers the ultimate in efficiency and ease of operation.

Our range includes:

- Mini Winch Fork Stacker
- Manual Hydraulic Fork Stacker
- Battery Electric Fork Stacker

Pallet Cages

Pallet Cages are a great storage option for any warehouse. They are cost effective as well as space saving.

The design of the cages is to safely store and transport the contents of the cage. Constructed from heavy duty steel, a pallet cage is strong enough to handle any warehouse environment.

The supply of cages can either be with or without a Hardwood Pallet. The purchase of cage Lids and PVC Covers are to provide a safe and secure storage of the cages contents. Our range of cages features a unique positive locking bar that ensures there is no movement when stored on racking.

Using the drop down gate of the 825mm and 900mm cages, there is quick and easy access to stock within the cage. Clamp on cages can collapse, to save space. This not only saves space when not in use, but improves transportation costs.

Pallet Jacks

Hand trucks take loads of up to 2500kg, taking away the need for physical force of an operator. Features of the hand truck include easy access entry and exit rollers to suit hardwood pallets.

Our range of Pallet Jacks include manual and battery as well as Hi Skid Lifters.

- Standard Pallet Jacks
- Narrow Pallet Jacks
- Low Profile Pallet Jacks
- Pallet Jack Semi-Electric
- Hi Skid Lifters

Scissor Lift Tables

Lift tables are a 4-wheeled hand trolley that includes a platform. The platform has the ability to be raised and lowered. They have a variety of uses ranging from workshops, warehouses and dispatch departments. They are operated using a foot-controlled hydraulic pump for smooth lifting and lowering. The speed of this lifting and lowering can be easily adjusted thanks to a hand-operated control valve.

Powered Lift Tables are able to be raised and lowered utilising a hydraulically powered scissor mechanism. They have a variety of uses ranging from workshops, warehouses and dispatch departments.

Stillages

Stillages are a raised platform that is mostly fitted with a cage or sides. It is an ideal materials handling equipment in the warehouse for the transportation and storage of stock.

A stillage can collapse, to enables you to save space in your warehouse or workshop. This not only saves space when they are not in use, but also improves transportation costs.

A stillage can either be used in a Selective Pallet Racking system or they can be used as stand alone units. The stacking of stillages provides a space saving solution. The easy transport of a stillage around the warehouse is using the two point forklift and pallet truck access.
