WAREHOUSE SAFETY RACKING AUDITS

In order to comply with Australian Standard AS4084-2012, all warehouses are required to complete Racking Safety Audits regularly.

“Inspections shall be carried out on a regular basis, and at least every twelve months”

Safety and Protection

Regular auditing and compliance to the standard is all about the safety and protection of personnel, equipment and your investment.

How does Abbott conduct a Racking Safety Audit?

An audit provided by Abbott Storage Systems is a visual examination by a trained and experienced inspector, who will assess the racking systems for damage and compliance against the Australian Standard, followed by a full assessment report.

The steps include:

- Visual site examination and assessment
- Compliance report compilation
- Recommendation and proposal for remedial actions required
- Perform corrective actions
- Ongoing compliance

Risk assessment is separated into 3 categories:

Green – Acceptable Damage: Damage is within acceptable limits – requires monitoring
Amber - Hazardous Damage: Requires unloading & corrective action completed within 4 weeks
Red - Very Serious Damage: Requires unloading and corrective action taken immediately

Safety is Priority

At Abbott Storage Systems, we care about your safety.
We can assist your company to comply and give you peace of mind.
